# JANSSEN COSMETICS

## BODY

- **Pleasant fragrance**
- **Moisturises**
- **Stimulates and smoothes**
- **Replenishes lipids**
- **Protects**

### Application at home

Gently rub Vitaforce ACE Body Cream into your skin after every bath or shower.

## Vitaforce ACE Body Cream

### NOURISHING BODY CREAM WITH VITAMINS

Every woman wants soft, smooth skin from head to toe. And who hasn't had those dry areas, uneven patches and sections that lack elasticity? Unfortunately, skin begins to sag and slacken as it gets older, due to hormone changes, a decrease in collagen and elastin synthesis, and also external influences such as UV light and stressful stages of life. The organ becomes dryer, loses tightness and becomes less even in appearance.

Our new silky smooth body cream is enriched with the three valuable A, C and E vitamins and combats all of these tendencies.

Vitaforce ACE Body Cream leaves users' skin even, soft and smooth. Valuable vitamin A gives the skin a smooth appearance, while vitamin C inhibits the production of melanin and gets rid of complexion irregularities. At the same time, vitamin E provides the cells with the protection they need, and hyaluronic acid and Pentavitin® moisturise the skin intensively.

Vitaforce ACE Body Cream has a pleasant fragrance and is absorbed into the skin quickly. Its shea butter has a gentle lipid-replenishing effect and coats the skin with valuable lipids.

### ACTIVE INGREDIENTS

- **Vitamin A palmitate:** Vitamin A palmitate improves dry, rough skin. It increases cell division and collagen production, and reduces collagen breakdown. This impedes the skin's ageing process, and the epidermis becomes more resilient, more even and smoother
- **Sodium ascorbyl phosphate:** Also referred to as vitamin C phosphate, sodium ascorbyl phosphate stimulates the synthesis of collagen fibres, makes the skin smoother, protects it from free radicals, inhibits the production of melanin and evens out irregularities on the skin
- **Vitamin E acetate:** Protects cell membranes from free radicals
- **Shea butter:** Nourishes and soothes the skin while replenishing lipids at the same time
- **Long-chain hyaluronic acid:** Nourishes, moisturises and smoothes the skin
- **Pentavitin®:** Pentavitin® is a moisture-retaining substance obtained from natural sugars. It attaches itself to the keratin in the skin and hydrates the skin very effectively thanks to excellent water-binding properties
