Ceramide Protection

SKINCARE CAPSULES WITH CERAMIDES AND VITAMIN C

Ceramide Protection is an intensive treatment that leaves skin firm and radiant with an even tone. The silky, fast-absorbing oil combines ceramides and pro-vitamin C to improve skin texture, reduce age spots and make skin appear more youthful overall. As a precisely measured single dose, the capsules are super convenient and effective to use. In addition, the capsule form guarantees the ingredients remain fresh and effective.

Ceramide Protection contains moisturising lipids, called ceramides, which strengthen the natural barrier function of dry, mature skin, reduce moisture loss and thus minimise the appearance of fine lines and wrinkles.

At the same time, highly concentrated pro-vitamin C leaves the skin looking smooth and radiant. The innovative, very stable vitamin C derivative is converted into pure vitamin C in the skin, where it unleashes its many positive properties. It promotes collagen synthesis and at the same time inhibits the breakdown of collagen fibres. As a powerful antioxidant, it neutralises harmful free radicals and counteracts premature skin ageing. Last but not least, vitamin C reduces alterations in pigmentation and increases the skin's radiance.

For best results, we recommend using the 30 capsules as a month-long treatment. However, they can also be used in a targeted way as and when required.

Home care application

Apply Ceramide Protection in the morning and/or evening before applying your skincare cream. Twist open the capsule cap or cut it off with scissors. Squeeze the contents out of the capsule and apply to the skin using your fingertips. Paying special attention to lines and wrinkles, gently massage the delicate formula into the skin. For external use only.

Note: Face Guard Advanced effectively protects the skin from UV radiation. Simply apply the lightweight emulsion during the day before applying Ceramide Protection capsules.

ACTIVE SUBSTANCES

- **Ceramide III:** Supports the skin's natural barrier function by adding intercellular lipids; reduces the skin's TEWL, plumps fine lines and wrinkles, and increases the skin's moisture content
- **Pro-vitamin C:** Ascorbyl tetraisopalmitate, stable vitamin C derivative, transforms into pure vitamin C in the skin, stimulates collagen synthesis and at the same time inhibits the breakdown of collagen fibres, helps reduce UV damage, helps control melanin synthesis
- **Vitamin E acetate:** Becomes free vitamin E in the skin and neutralises harmful free radicals
- **Bisabolol:** Inhibits melanin synthesis; reduces pigment spots and helps brighten skin tone; soothes skin
- **Hop extract:** Helps reduce hyperpigmentation
- **Malonic acid derivative:** Protects against lipid peroxidation and reduces the effects of harmful environmental influences on the skin
