# JANSSEN COSMETICS

## OILY SKIN

- Creates an even, fine complexion
- Stimulates cellular renewal
- Removes excess horny flakes
- Refines pores
- Provides a natural glow to the skin
- Reduces inflammation

### Application at home

AHA + BHA Exfoliator should preferably be used after cleansing the skin in the evening. To do this, spread the preparation generously over the face and neck 2-3 times per week, avoiding the eye area. Leave-in time 5-15 minutes. Massage in briefly using damp fingertips and remove excess with a mask sponge and plenty of lukewarm water. Then follow up with the night cream.

**Tip:** The concentration of 20% AHA & BHA also allows an effective but safe home treatment.

#### Heads up:

AHA + BHA Exfoliator 20%: pH value of 4.2

AHA + BHA Exfoliator 30%: pH value of 3.6

Each time the face mask is used, this thins the epidermis and makes it sensitive to UV light. This is why it is important to ensure adequate UV protection and apply Face Guard Advanced throughout the day. Only then should you apply the care cream as usual.

## AHA + BHA Exfoliator

### AHA & BHA FRUIT ACID FACE MASK

AHA + BHA Exfoliator is a highly concentrated fruit acid face mask specifically developed for oily, blemished and acne-prone skin. The formula combines four fruit acids (AHA) with pure salicylic acid (BHA) to reliably remove dead skin cells and open up clogged pores. Thanks to the antibacterial effect of salicylic acid, inflammatory processes are reduced and blemishes are diminished at the same time.

However, AHA + BHA Exfoliator can do even more than that: by removing the uppermost horny layer, the skin renewal process is activated and the synthesis of collagen is stimulated. In the long term, wrinkles are visibly reduced, pores are refined, unevenness is smoothened out and age and pigment spots are diminished.

The fruit acid face mask is offered in two different concentrations. The professional-use product contains a total of 30% AHA & BHA while the general consumer product contains 20% AHA & BHA.

Due to the high concentration of 30% AHA & BHA, the professional-use product must be applied extremely carefully in the beauty booth.

### ACTIVE INGREDIENTS

- **AHA Fruit Acid Complex:** Consisting of glycolic, malic, citric and tartaric acids, the formula gently and safely dissolves excess cornification of the skin (keratolytic effect), stimulates cell proliferation and improves skin structure
- **BHA salicylic acid:** Naturally occurring active ingredient with antimicrobial and anti-inflammatory effects; In addition, excessive cornification is loosened
