# JANSSEN COSMETICS

## OILY SKIN

- **Foams up easily with water**
- **Cleans intensively and gently**
- **Removes dead skin cells**
- **Refines the complexion**
- **Leaves the skin with a silky matte feel**
- **Improves absorption capacity of follow-up care**

## Enzyme Peeling Powder

### GENTLE FACE MASK IN POWDER FORM

Enzyme Peeling Powder frees the skin intensively and gently from loose skin cells and excess sebum. The fine-grained powder foams up slightly with water and then gets to work with its keratolytic effect. Free from mechanical exfoliating particles, it is also suitable for sensitive, blemish-prone skin.

Enzyme Peeling Powder contains a keratolytically acting enzyme complex of lipases and proteases, which is activated by foaming with water. It ensures that the intercellular cement between the dead corneocytes sloughs off and the dead cells can be more easily removed.

The result? A visibly more even and noticeably smoother complexion. With regular application, cornification problems and the resulting blemishes can be reduced.

We recommend the gentle but extremely effective Enzyme Peeling Powder especially for acne sicca.

### Application at home

Foam up a tablespoon of powder with water and spread over the face and neck. Gently massage into the skin using circular motions for about five minutes. Then leave it on for 3 minutes. Finally remove it thoroughly with a small dampened sponge.

**Caution:** The powder particles may lump together and negatively impact dosage control if they come into contact with water.

## ACTIVE INGREDIENTS

- **Enzymes:** Lipases and proteases (subtilisin) embedded in maltodextrin, used for gentle enzymatic removal of corneocytes
- **Silica:** Has an absorbing and mattifying effect on the skin
- **Sodium cocoyl glycinate:** A natural surfactant made from glycine and fatty acids from coconut. Used for gentle face cleansing. Leaves the skin feeling silky and soft
